

Certification Process.

Minor Change.

Major Change.

EASA Form 1.

As part of the certification program, ACM's development team carefully identifies and reviews all specifications and requirements regarding the product's safety and reliability followed by the complete type design and all documents required by the customer. These include a service bulletin (for instructions of continuing airworthiness), a *Minor Change Approval Certificate* (in the case of 9g seats), as well as the approval by EASA Form 1.

In the case of a *Major Change*, a *Supplemental Type Certificate (STC)* replaces the *Minor Change Approval Certificate*. Through this document, the *Major Change* is released directly by EASA.
